AEM 4545/ECON 3545

International Finance and Macroeconomics

Fall 2019

Professor Eswar Prasad

This course will examine the determinants of international capital flows and their consequences for growth and volatility. Basic analytical models in open economy macroeconomics and international finance, including those related to exchange rate dynamics, will be covered. The course will analyze the challenges created by rising global financial integration for monetary policy, financial regulation, and other policies. Emerging market perspectives on these issues will be emphasized, with a special focus on the economies of China and India. The course will also discuss growth prospects for emerging markets, the myriad domestic and external challenges that they face in sustaining high growth, and the implications for the world at large. One module will cover the implications of new financial technologies for central banking and international finance. *Students will be required to write an independent research paper.*

Prerequisites: Intermediate-level courses in macroeconomics, international economics, and econometrics/statistics.
